

NAPSI-CERTIFIED PURE MAPLE WATER

- Maple water is another term for maple sap, the clear liquid that flows naturally through sugar maple trees. Maple syrup, on the other hand, is a concentrated form of maple sap, and the result of evaporating water from the sap until it reaches the consistency of syrup.
- Full of the electrolytes, minerals and antioxidants naturally occurring in sugar maple trees, maple water is also naturally low in sugar.
- With only 20 calories per one cup serving, it has half the calories of coconut water, making it a healthy and refreshing source of hydration.
- To help consumers identify the highest quality maple water, The Federation of Quebec Maple Syrup Producers developed the NAPSI certification, a unique production process that preserves the real taste and quality of maple water from Canada.
 - Unlike other maple water offerings currently available in the U.S., NAPSI-certified maple water is unrefined and preserves not just some, but all of the original characteristics of maple sap.
 - NAPSI, which stands for natural, authentic, pure, sterile and integral, is the only quality seal to date that guarantees you get the authentic sugar bush experience.
- Maple water is a refreshing drink on its own, but also adds a subtle hint of sweetness and maple flavor when used in cooking and baking. Mixologists use pure maple water in ice cubes and cocktails, and chefs choose it as an ingredient for marinades, soups, ice creams and sorbets.
- With 46 essential nutrients, including potassium and sodium, maple water is an excellent thirst quencher, and used by athletes to rehydrate after physical exercise.
